

AvanSurf™

Surfactants

AvanSurf™ high-performance frac surfactants are engineered to improve flowback efficiency, reduce emulsions, lower interfacial tension, and enhance hydrocarbon recovery across demanding hydraulic fracturing applications.

Designed for compatibility with a wide range of fluid systems and operating conditions, AvanSurf™ products help optimize well performance and production efficiency.

AvanSurf™ FS-105

Cost-effective non-emulsifier and flowback aid formulated to reduce emulsions, improve fluid mobility, and support efficient well cleanup operations.

AvanSurf™ FS-110

High-performance flowback surfactant designed to improve hydrocarbon recovery, reduce fluid trapping, and enhance cleanup efficiency across a wide range of hydraulic fracturing conditions.

AvanSurf™ FS-210

Advanced small molecule surfactant engineered to deliver exceptional flowback performance, ultra-low interfacial tension, and enhanced recovery in shale and tight-sand applications.
